Figure 4
(below)

- New hose wraps (Fig. 1) are now bolt-on to accommodate a longer hose, a hose reel, or replacing damaged ones.
- The newly designed tongue space (Fig. 2) can store sand bags, sealer buckets, barricades, or anything else you need to haul to the job site. With the re-engineered engine hood, you no longer have to unload your hotbox or blower to put gas in the engine! The fixed panel we created is a perfect spot to mount your brush box, or to simply install hooks to attach brooms and brushes or even edging boards.
- Another small change that makes a huge difference is the lack of factory decals on the sides (Fig. 4). Your name is what customers need to see, not ours.
- All surface areas (Figs. 3 and 4) that may be stepped on now have the same tough, non-skid coating you find in your truck bed.

These machines are the most versatile sealcoat machines that you could add to your fleet, yet they are so easy to operate that they also make the perfect beginner machine.

Your entire operation can be handled by one man. The machines have the perfect capacity for a medium sized parking lot or a handful of residential driveways. The ESP has plenty of power to run one or two hand wands with 75' hoses. And the ESSP runs a 6-nozzle, 8-foot-wide spray bar (optional) for the perfect even coat on any big lot.

Nealco™ equipment is built to last a lifetime because we realize these machines are a major investment for your company.

We pride ourselves on being a manufacturer that focuses on the contractor. This is why most of the units we produce are custom models. Don't hesitate to call us with special applications or specifications. We are happy to accommodate you.
